## Lamishield properties

Compact Hpl Lamishield is the answer to a specific increasingly requirement: the reduction of risks of infections and illness related to cross contamination.

Thanks to the silver-ion technology fully incorporated into the decorative layer, Lamishield reduces the level of bacteria on its surface by up to 99.9% according to ISO 22196:2011

In conjunction with good hygiene and cleaning practice, Lamishield is able to inhibit the growth of a broad spectrum of microbes.

It is used in all types of interior masonry cladding (surgeries, resuscitation rooms, negative pressure chambers, etc.), table surfaces, workbenches, food surfaces, desks, etc.

Ideal for use in hospitals, clinics, schools, restaurants, laboratories, nursing homes, food industries, gyms, etc.
